US_DeliveryChecker

The US Delivery Checker program is used to collect delivery and product-related information for a list of ASINs. The tool retrieves shipping details and focuses mainly on identifying estimated delivery timelines for non-Prime products.

First, users must prepare an input file named inputs. In this file, each ASIN must be entered on a new line without adding any extra spaces or additional characters.

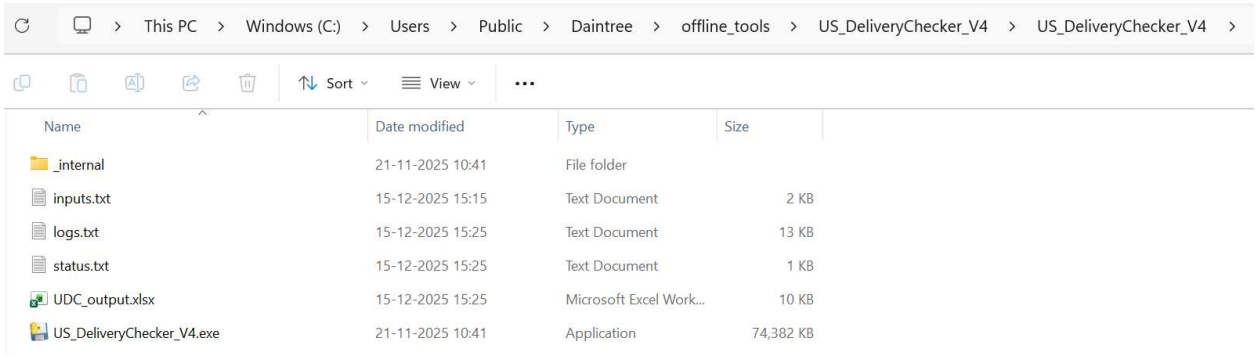
After preparing the input file, run the US_DeliveryChecker tool. The program reads each ASIN from the input file and retrieves the required product and shipping information.

The tool specifically analyzes non-Prime products and calculates their estimated delivery days.

Only products with estimated delivery dates are considered valid for the analysis. This helps identify products that fall within standard shipping timelines for non-Prime items.

After processing all ASINs, the program generates an Excel file named UDC_output.xlsx which contains the delivery information.

The tool supports bulk processing, allowing users to analyze multiple ASINs efficiently and reduce manual work.



US Delivery Checker Workflow

Step 1: Prepare Input Asins

Open one app and place your Asins.

Enter the ASINs in the following format:

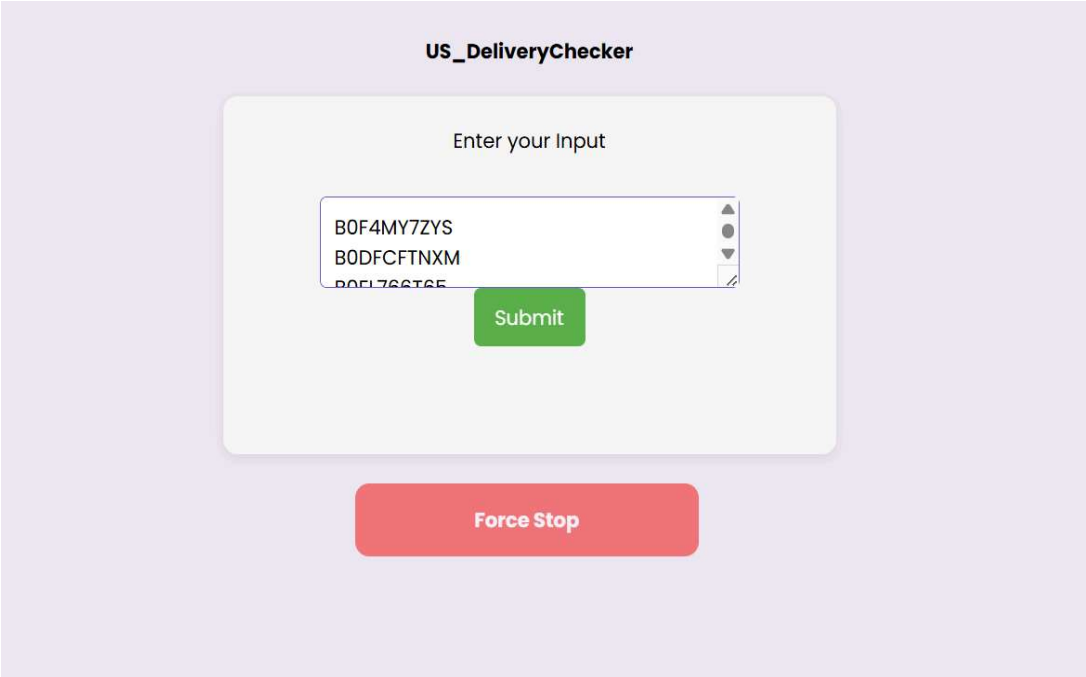
- One ASIN per line
- Do not include extra spaces or characters

Example:

B0F4MY7ZYS

B0DFCFTNXM

B0FL766T65



Step 2: Program Setup

Open the **US_DeliveryChecker tool in one app**.

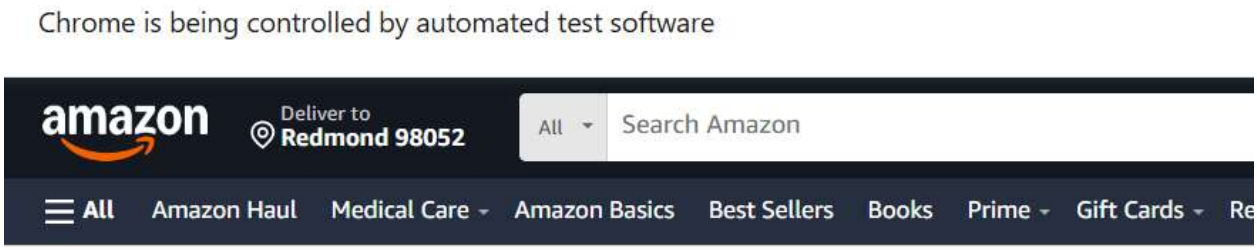
Tool name:

US_DeliveryChecker

Ensure the required **inputs** file is placed in the correct folder.

Run the program 5chromes are open.

And next we have to click next tab in that opening chromes and search amazon.com and change the pincode to 98052



Step 3: Program Execution

When the program starts:

- The tool reads each ASIN from the **inputs** file.
- It retrieves **product and shipping information**.
- The tool specifically checks **non-Prime products**.

The program calculates the **estimated delivery days** for each ASIN.

Only products with **delivery dates** are considered valid for the analysis.

Step 4: Output

After the process is completed, the program generates an Excel file.

Output file name:

UDC_output.xlsx

	A	B	C	D	E	F	G	H	I	J
1		price	delivery	availability	brand	ships_from	sold by	Days	ratings	
2	0D5D9Q5V	No price	Tuesday,	available	lazyfun	Amazon	ZHnswqi	5		
3	0DCLVZV7	No price	Monday,	available	OtterBox	No data	Amazon.c	4		
4	DQ13VMC	No price	March 26	available	NovelGoal	No data	NovelGoal	26		
5	0C4Y76CR	No price	March 27	available	Hemobllo	No data	Nadinrarm	29		
6	30BS4C7TF	No price	Monday,	available	OtterBox	No data	Amazon.c	4		
7	0DK8BRSQ	No price	April 2 - 1	available	Jesscasda	No data	GUanze	29		
8	0CKS5CXW	$15.45	Friday, Ma	available	Not Founc	no shipfro	no sold by	15	no ratings	
9	0DP6VN62	Not availa	Not availa	Currently	Zunate					
10	30F222SS7	Not availa	Not availa	Currently	Zopsc					
11										
12										

Open the Excel file to view the results.

The output file contains **delivery-related information for each ASIN**, including estimated delivery timelines for **non-Prime products**.

This helps determine **standard shipping timelines for products without Prime eligibility**.
